

**HB RACING D819 CHASSIS (-2MM)**

New from HB Racing is a chassis for the D819 nitro buggy that is designed for the newest track layouts with high grip. The new chassis is 2mm shorter than the stock D819 chassis, which moves the weight balance back, making the car easier on brakes and faster in the corners. The new chassis is precision machined from aluminum for a perfect fit, and hard anodized black for durability.

Note: The D819 stock center rear drive shaft remains the same, it should be used without O-rings.

Compatible with: D819, D817V2

204553 D819 Chassis (-2mm)
